

## Version 4.9.0 (2018-12-13)

- Negative on hand now compensates with past due orders in transition in the planning formulas.
- The ability to sum minimum display quantity and safety stock in the formulas as opposed to taking maximum of them.
- Now only the 'Inactive' an 'Termination' models set safety stock to zero for items with zero forecast.
- Streamline now sets a file lock on opened projects to ensure that one user does not override changes of the other user by accident.
- DC fill rate column in the Inventory report tab.
- Locations are not shown if there's only one.
- The ability to group items by supplier in the List view tab.
- Split the code and description columns for locations in the List view and Inventory report.
- Supplier code added in the Spreadsheet connection.
- Export of Inventory report and Distribution center report to a database.
- Improved built-in integrations with Spire and Cin7.
- Minor GUI improvements.
- Bug-fixes.

## Version 4.8.9 (2018-11-02)

- Added 'In Transition' tab in the Spreadsheet connector.
- Improved integration with Stitch, TradeGecko, QuickBooks, and Cin7.
- Now we detect dedicated Distribution Centers and always show them in the DC tab, even if some items aren't sourced.
- Now database connector can export the 'To Order' quantity for Min/Max replenishment strategy.
- Minor GUI improvements.
- Bug-fixes.

## Version 4.8.8 (2018-09-28)

- Supplier field added in the List View tab.
- Database connector settings can be protected with a password.
- Minor GUI improvements.
- Bug-fixes.

## Version 4.8.7 (2018-09-10)

- Location code and location description fields are now separate.
- Cin7 data connector.
- Minor GUI improvements.
- Bug-fixes.

## Version 4.8.6 (2018-08-27)

- Bug-fixes.

## **Version 4.8.5 (2018-08-24)**

- Improved holiday editing.
- Streamline now offers a 14-day full version trial.
- A beta version of Stitch Labs data connection.
- Minor GUI improvements.
- Bug-fixes.

## **Version 4.8.4 (2018-08-17)**

- Basic holiday editing.
- Mass clear of forecasting properties using the right-click menu.
- Changed UI for spreadsheet connection selection.
- Minor GUI improvements.
- Bug-fixes.

## **Version 4.8.3 (2018-08-10)**

- Inventory report columns marked yellow can be edited using the right-click menu (or F2).
- Service level with 0.1 step.
- Now we show recommended purchase value in the KPI report.
- Minor GUI improvements.
- Bug-fixes.

## **Version 4.8.2 (2018-07-12)**

- Bug-fixes.

## **Version 4.8.1 (2018-07-10)**

- A new 'Order By' column in the Inventory Report that shows an optimal date to place a new PO.
- New filter operations: Contains, Doesn't contain
- Minor GUI improvements.
- Bug-fixes.

## **Version 4.8.0 (2018-06-22)**

- Filters in the Inventory report and Distribution center report.
- Minor GUI changes.
- Bug-fixes.

## **Version 4.7.9 (2018-06-06)**

- Optional Net order column in the Inventory Report.
- Bug-fixes.

**Version 4.7.8 (2018-06-01)**

- Bug-fixes.

**Version 4.7.7 (2018-05-29)**

- Improved large project file usability.
- Minor GUI changes.
- Bug-fixes.

**Version 4.7.6 (2018-05-22)**

- Minor GUI changes.
- Bug-fixes.

**Version 4.7.5 (2018-05-19)**

- Bug-fixes.

**Version 4.7.4 (2018-05-14)**

- Support for multiple distribution centers in the higher echelon.
- Support for minimum shelf quantity.
- Added a thousand separator to numbers.
- Minor GUI changes.
- Bug-fixes.

**Version 4.7.3 (2018-04-16)**

- Combined 64/32-bit package.
- Historical revenue report in the List View.
- Optimized ODBC connector that works 2-1000x faster.
- Minor GUI changes.
- Bug-fixes.

**Version 4.7.2 (2018-04-05)**

- Bug-fixes.

**Version 4.7.1 (2018-04-03)**

- Minor GUI changes.
- Bug-fixes.

## Version 4.7.0 (2018-03-16)

- Converted to a 64-bit application. IMPORTANT: Database connections that use the 32-bit ODBC driver has to be reconfigured to use the 64-bit ODBC driver.
- The column 'Days of supply' in the Inventory Report now accounts for 'Pending orders'.
- Updated Intermittent model. Transaction probability calculation takes lost days into account.
- QuickBooks connector reworked in order to support 64-bit Streamline.
- Inventory Report now exports the ABC classification to the 'Export parameters' file.
- Inventory Report now has the 'Model type' column.
- A number of GUI improvements.
- Bug-fixes.

## Version 4.6.6 (2018-03-05)

- Bug-fixes.

## Version 4.6.5 (2018-02-28)

- An option to select periods where ordering is available.
- Improved the view of the Purchase Plan. The 'Order Now' column now does not replace the first column in the purchase plan.
- Japanese translation.
- Historical On Hand report in the List View.
- The purchase order section of the Inventory Report now shows the number of days of supply for recommendations.
- Minor GUI improvements.
- Bug-fixes.

## Version 4.6.4 (2018-01-23)

- The historical turnover report in the List View tab.
- Percentage accuracy. Can be turned on in the project settings.
- Improved intermittent demand model.
- Minor GUI changes.
- Bug-fixes.
