

## 7.9.1 Toolbar

The **Toolbar** of the [Demand forecasting](#) tab consists of:

- **Search** bar is used to find an item in the **Tree view** by the *item code* or *item description*. To start the search, click the search button or press Enter.
- **Settings** opens the Program settings dialog which allows customizing the program, current project, and the main Streamline tabs.
- **Approve/unapprove** button approves or unapproves the forecasts of the selected node (and all the children nodes) in the **Tree view**.
- **Needs Attention** button marks one chosen item to be further checked or adjusted.
- **Checked button** marks a selected item as verified.
- **Add note** button allows you to [add an annotation](#) to the selected node in the **Tree view** or the active editable cell in the **Table**.
- **Forecast versions** button opens a dialog for forecast version configuration.
- **“Bread crumbs”** indicate the path to the currently selected Tree view node and allows you to pick any hierarchy level of this path by clicking on one of the Bread crumbs elements.

By default, Streamline always re-forecasts the project as you:

- [update your data](#);
- [change the data source](#) and fully reimport your project;
- change [forecasting setting](#);
- unapprove forecasts;
- [change project settings regarding forecasting](#);
- [make product substitutions](#);
- [override actual sales](#) or [stockout days](#);
- change [order availability](#) constraints.
- change the on hand history;
- change the amount of stock out days.
