7.8. Start Tab

Start tab is active by default when you start Streamline. It is divided into three more tabs which are **Projects**, **Examples** and **Tutorials**.

Projects

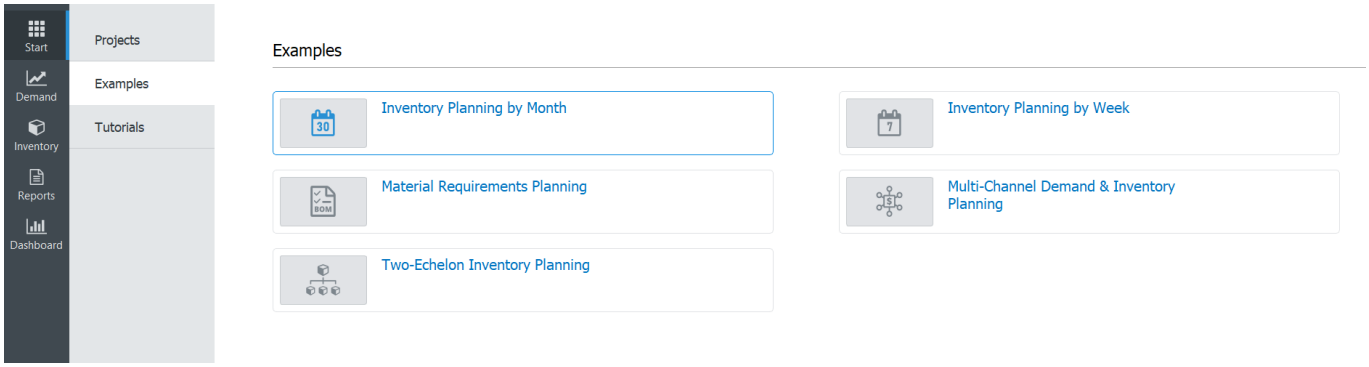

The tab contains the buttons for *starting a new project*, *opening an existing one* as well as *connecting to a project through the server*.

Besides that, the tab has the *Recent projects* section where the user can get quick access to previously opened projects.

Examples

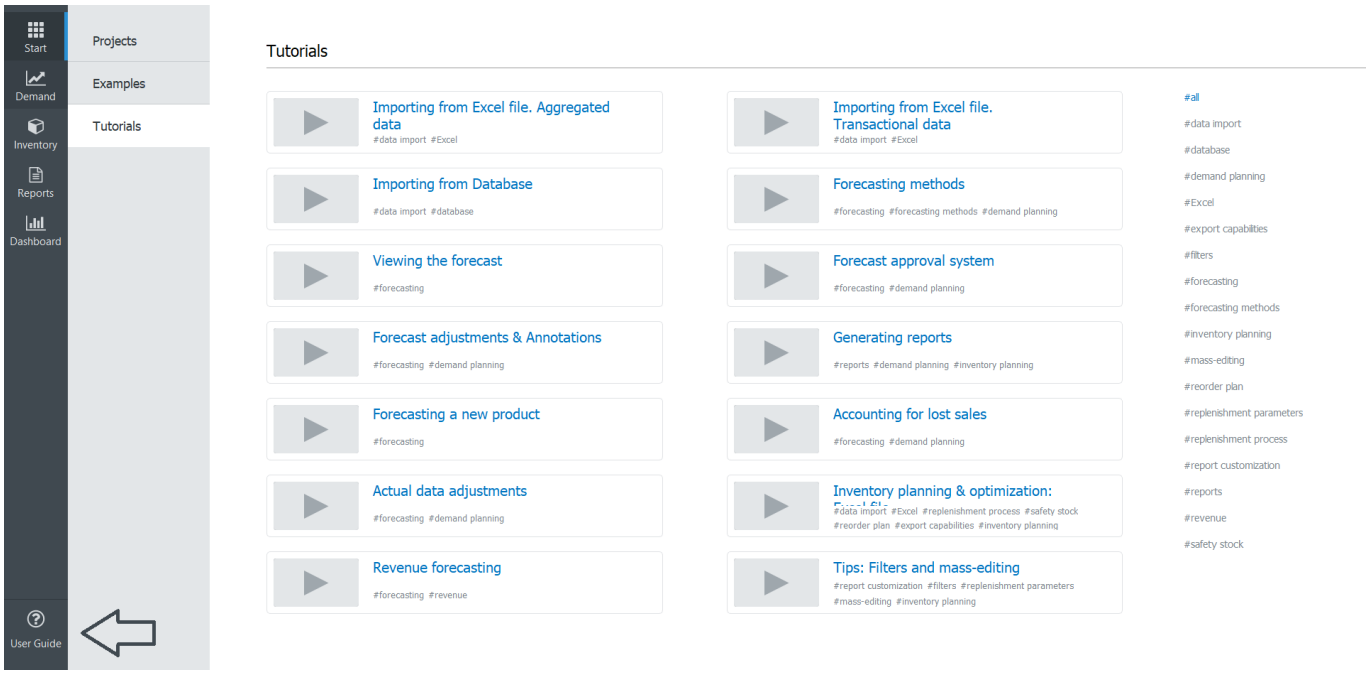

the tab contains five build-in examples which cover most of the business models that Streamline supports, like manufacturing or multi-echelon chain. These projects have all the necessary data, so can be used for training purposes.

Tutorials

Along with the *User Guide* (a shortcut to the website is available in the lower-left corner), Tutorials are

the short videos covering some necessary information for easy and comfortable learning of the software.
