# 4.5.8. How to Import Data from NetSuite

In this article, we describe:

- integration limitations,
- imported data, and
- the data import workflow.

## **Integration Limitations**

Currently, Streamline does not import the on-hand history of products from NetSuite, however, this can be accounted for by customizing the default SQL scripts. This limitation makes Streamline unable to:

- calculate inventory turn-over,
- compute the number of days in the period you had run out of inventory (Stockout days), and
- automatically determine whether lost sales are caused by a stock-out or zero demand.

## Imported data

Data imported into Streamline is described in the Inventory Management Systems article.

## **Data Import Workflow**

Streamline imports data from NetSuite by executing SuiteQL queries through REST Web Services. SuiteQL is a query language based on the SQL-92 revision of the SQL database query language. SuiteQL supports the syntax for both SQL-92 and Oracle SQL. However, you cannot use both syntaxes in the same query.

As NetSuite is a highly customizable system, Streamline pulls data that is commonly used by most customers, however, it can be easily adjusted to the needs of a particular customer by changing the default SQL queries.

Streamline uses Token-based Athentication (TBA) to pull NetSuite data. It needs you to provide client credentials (*Consumer key* and *Consumer secret*) and access token credentials (*Token ID* and *Token secret*). The next section of this page explains how to obtain those credentials.

### **Retrieving Authentication Credentials**

To set up TBA for your NetSuite account and get credentials metioned earlier, do the following:

1. Enable REST Web Services and TBA in your NetSuite account.

1.1. Log in to your NetSuite account as Administrator and go to the menu **Setup** > **Company** > **Enable Features**.

1.2. Click on the **SuiteCloud** subtab (see figure below).

٩	★	谷	Activities	Box Files	Payments	Transactions	Lists	Reports	Customization	Documents	Setup	Support	Demo Framework	
Enabl	e Fe	atur	es											More
Save	Ca	ncel	Reset

VIEW SUI	ITECLO	ID TERMS	S OF SERVICE.											
Sui	iteBuil	der												
<b>~</b>		OPTION	S											

1.3. Scroll down to the SuiteTalk (Web Services) section and check the REST WEB SERVICES

ASSIGN CUSTOM TRANSACTION ITEM OPTION FIELDS TO THE LINE ITEMS OF YOUR TRANSACTION RECORDS. BY ENABLING THIS FEATURE, YOU AGREE TO SUITECLOUD TERMS OF SERVICE

# 1.4. Scroll down to the **Manage Authentication** section and check **TOKEN-BASED AUTHENTICATION** (see figures below). Agree to the NetSuite terms and conditions.

option (see figures below). Agree to the NetSuite terms and conditions.

1.5. After that, click the **Save** button at the top of the page (see figure below).

٩	$\star$		Acti	vities	Box Files	Payment	s Transact	tions L	ists	Reports
Enable S <sub>W</sub> e		atur ncel		set

VIEW SUIT	FECLOU	D TERMS	OF SE	RVICE						

- 2. Create a role that will use TBA.
- 2.1. Go to the menu **Setup > Users & Roles > Manage Roles > New**.
- 2.2. Give it a name, for example, **TBA Access Role** (see figure below).

Save Cancel	Reset
NAME *	Reset

2.3. Set the option **Web services only role** checked in the **Authentication** section (see figure below).

Authentication	
SINGLE SIGN-ON ONLY	
✓ WEB SERVICES ONLY ROLE	
RESTRICT THIS ROLE BY DEVICE ID	

2.4. Set this role as having access to all your subsidiaries by selecting the **ALL** option (see figure below).

2.5. Click on the **Permissions** tab, and add permissions shown in the figures below.

SuiteAnalytics Connect - Read All	Full			
SuiteScript	Full			
User Access Tokens	Full			

- 2.6. Then, click the **Save** button.
- 3. Create a login (emploee) that will use the created role.
- 3.1. Go to the menu **Lists** > **Employees** > **New**.
- 3.2. Give the login a name, for example, **TBA Access User** (see figure below).

🤱 Employee 🔍	
Save Cancel Reset	
Primary Information	
TEMPLATE	INITIALS
EMPLOYEE ID *	JOB TITLE
MR./MS	SUPERVISOR
NAME TBA Access User	
Email   Phone   Address	
EMAIL	

3.3. Click on the **Access** tab and: 1) check the **Give access** checkbox; 2) set a password for the login; 3) add the newly created role to the login (see figure below).

<u>Communication</u>	Address	Human Resources	Time Tracking	<u>P</u> ayroll	Commission	Marketing	Access	System Information

#### 3.4. Click the **Save** button.

4. Create an integration record to use TBA. Integration record is an entity that represents a 3rd party system that wants to have access to the NetSuite data. In our case, that will be Streamline.

#### 4.1. Go to the menu **Setup** > **Integration** > **Manage integrations** > **New**.

4.2. Give the application a name, for example, *GMDH Streamline*.

4.3. Under the **Authentication** tab, uncheck the **User credentials** option and check the **Tokenbased authentication** option (see figure below).

2024/02/09 16:13	9/14	4.5.8. Ho	w to Import Data from NetSuite
Integration Save Cancel	Reset		
NAME *		STATE *	
GMDH Streamline		Enabled	-
DESCRIPTION		NOTE	
			~~
	11		
Authentication Web	Services Execution Log <u>R</u> ESTlets	Execution Log	
USER CREDENTIALS  TOKEN-BASED AUTHENT			
Save T Cancel	Reset		

4.4. Click the **Save** button. The confirmation page displays the client credentials (**Consumer Key** and **Consumer Secret**) for our application (see fugure below).

4.5. NetSuite displays the **Consumer Key** and **Consumer Secret** only the first time you save the integration record. Thus, copy and paste these credentials into a text file. We will use them when will be connecting from Streamline to NetSuite further.

5. Issue an access token for the created integrated application and employee.

#### 5.1. Go to the menu **Setup** > **Users/Roles** > **Access Tokens** > **New**.

5.2. Select our integrated application in the **Application name** selector. In our case it is GMDH Streamline.

5.3. Choose the user, we created for TBA in the **User** selector. In our case it is TBA Access User.

5.4. Select the role, we created for TBA in the **Role** selector. In our case it is TBA Access Role. (see figure below).

2024/02/09 1	6:13
--------------	------

	A	СС	es	S	Т	0	k	e	n

GMDH Streamline	•
USER *	
TBA Access User	-
ROLE *	
TBA Access Role	-
TOKEN NAME *	
GMDH Streamline - TBA Access User, T	BA Access Role

5.5. Click the **Save** button. The confirmation page displays the *Token ID* and *Token Secret* (see figure below). This information is only presented once. Let's also copy and paste these into the text file we used before. These credentials are also needed when connecting to NetSuite from Streamline.

### **Importing Your Data**

To create a new Streamline project from NetSuite data:

1. Go to the menu **File** > **New** > **NetSuite connection**. The **NetSuite connection** dialog appears (see figure below).

2024/02/09	16:13
-	

NetSuite connection	×
Account ID	
Consumer Key	
Consumer Secret	
Token ID	
Token Secret	
Starting date 1/1/2000 ~	Group by Month ~
Edit SQL queries	OK Save Cancel

2. Enter your NetSuite account ID into the Account ID field.

3. Enter the authentication credentials that we got earlier into the **Consumer Key**, **Consumer** Secret, Token ID, Token Secret accordingly.

4. Enter or choose the date to start the import from in the **Starting date** control.

To get accurate forecasts, we recommend providing Streamline with at least 24 months of sales history.

2019/05/21 13:44

5. Choose the data aggregation period in the **Group by** control. Streamline automatically aggregates your data in the given periods (days, weeks, or months). For example, if you want to see the forecasts, replenishment plans, and other reports in months, group the data by month.

6. Click **OK** to start the import.

### **Customizing Default SQL Queries**

The Edit SQL queries button opens the Database connection dialog where you can customize default SQL-queries to meet your requirements.
