# 2.3. Server setup

### Server activation

Once you install Server and run a Controller, you'll see a Streamline logo icon appear in your taskbar.

To activate your server license when you're setting up Server for the first time do the following:

26

10/27/2021

- 1. Right-click on Server Controller and choose the Activate Streamline Server option.
- 2. Type in required information and click OK.
- 3. Streamline Server is then activated.

S Activate server	×		
Register your license			
First name	John		
Last name	Doe		
Company	GMDH		
Email	johndoe@company.com		
License key	*****		
	OK Cancel		

The free Streamline client mode doesn't support server connection.

### **Controller configuration**

To specify what project should be run by Streamline Server do the following:

- 1. Right-click on a Controller icon and choose the Edit configuration option.
- 2. Then choose the Project file and specify a Port in the Edit configuration dialog.

S Edit configuration	×
Project anning by Month/Single-Loc	ation Inventory Planning by Month.gsl Choose project
Port 9980	Enable logging
	OK Cancel

For a Project file, you want to make sure to choose a previously created .gsl file. The one which is connected to your ERP system, database or Excel file.

By default, Streamline uses Port 9980. If this port is in use on your computer you can choose another one. Later on, you and other users will need to provide this Port number in Streamline Client when connecting to a server.

Streamline server allows running only one .gsl file at a time.

## **Start Streamline Server**

After you have activated Controller and set up the configuration, click on the Start Streamline Server. This option starts running the .gsl file and allows the user to connect to it in a multi-user mode. Next time you turn on your computer, the Server will be started automatically.

First time clicking on Start Streamline Server, the program will ask you to set up a root user.
