

4.5.14. How to Import Data from Skubana

In this article we describe:

- [correspondence between key terms in Skubana and Streamline](#),
- [integration limitations](#),
- [imported data](#), and
- [data import workflow](#).

Key Terms

The key entities which Skubana operates on are *master SKU*, *virtual SKU*, *categories*, *warehouse*, and *sales channel*.

Skubana	Streamline
Master SKU	Item
Virtual SKU	Item category right above item code.
Categories	Item categories above the virtual SKU category.
Warehouse	Location
Sales channel	Channel

Virtual SKU is imported into Streamline as a category right above master SKU (see figure below).

The screenshot displays the Skubana software interface. At the top, there is a search bar and navigation options like 'Settings', 'Approve/Unapprove', 'Add note', and 'Pause forecast'. A 'Horizon' dropdown is set to '12 months'. Below this is a table with columns for months from Oct 2020 to Mar 2021. The rows include 'Actual sales' (99), 'Statistical forecast' (0), 'Forecast overrides' (yellow), and 'Average sales price'. A blue navigation bar contains 'SKUBANA' and menu items: 'DASHBOARD', 'ORDERS', 'INVENTORY', 'PURCHASING', 'SHIPMENT'. On the left, a 'FILTER BY' sidebar shows 'Categories' and 'Labels'. The main area is titled 'PRODUCTS :: ACTIVE' and contains buttons for 'ADJUST SKU', 'CONVERT TO BUNDLE/KIT', and 'CONVERT TO CORE'. Below these is a table with columns 'TYPE', 'MASTER SKU', and 'NAME'. The table lists several T-shirt items, including 'T-SHIRT ORANGE-42', 'T-SHIRT ORANGE-41', and a 'T-SHIRT Virtual SKU' which is expanded to show 'Master SKU' items like 'T-SHIRT ORANGE-41' and 'T-SHIRT ORANGE-42'.

	Oct 2020	Nov 2020	Dec 2020	Jan 2021	Feb 2021	Mar 2021
Actual sales	99					
Statistical forecast	0	0	0	0	0	0
Forecast overrides						
Average sales price						

TYPE	MASTER SKU	NAME
	T-SHIRT ORANGE-42	T-SHIRT - 42, ORANGE
	T-SHIRT ORANGE-41	T-SHIRT - 41, ORANGE
	T-SHIRT Virtual SKU	T-SHIRT
	Master SKU	
	T-SHIRT ORANGE-41	T-SHIRT - 41, ORANGE
	T-SHIRT ORANGE-42	T-SHIRT - 42, ORANGE

Categories are imported in the opposite direction when the data hierarchy is being built in Streamline (see figure below).

The screenshot shows the Skubana software interface. On the left is a navigation sidebar with icons for Start, Demand, Inventory, Reports, and Dashboard. The main area displays a product tree on the left and a data table on the right. A red arrow points from the 'Yamaha CG-320' item in the tree to the 'Revenue' row in the table.

	Oct 2020	Nov 2020	Dec 2020	Jan 2021	Feb 2021
Actual sales	99				
Statistical forecast	0	0	0	0	0
Forecast overrides					
Average sales price					
Revenue	35,000	0	0	0	0
On hand	594				
Stockout days					
Projected inventory levels	788	788	788	788	788
Ordering plan	11	0	0	0	0

YAMAHA CG-320

BASIC INFO GALLERY LISTING SKUS VENDOR PRODUCTS FIELDS CUSTOMS

Name: Classic Acoustic Guitar Yamaha CG-320

UPC | MPN:

Buyer | Brand: Yamaha

Categories: Acoustic, Guitar, Musical Instruments

Labels: Select...

Setting up categories in Skubana

Let us have two products with the following categories in Skubana (see figure below).

YAMAHA CL-100 ✕

BASIC INFO GALLERY LISTING SKUS VENDOR PRODUCTS FIELDS CUSTOMS

Name:  

UPC | MPN:

Buyer | Brand:

Categories:

YAMAHA CG-320 ✕

BASIC INFO GALLERY LISTING SKUS VENDOR PRODUCTS FIELDS CUSTOMS

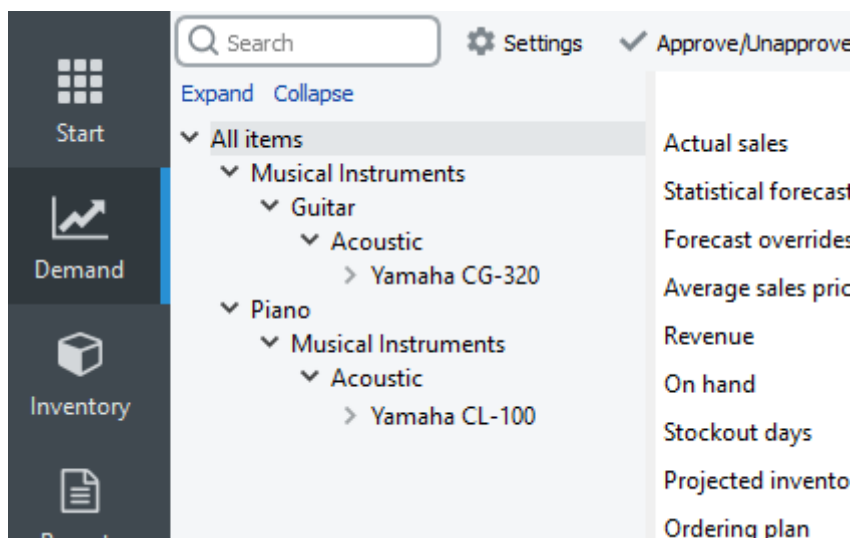

Name:  

UPC | MPN:

Buyer | Brand:

Categories:

As you see, Skubana sorts categories in alphabetical order from A to Z. Thus, if we import these products in Streamline, we will get the data hierarchy depicted in the figure below.

But, we want the **Piano** category to be under the **Musical instruments** category. The trick is to add a prefix letter to the **Musical instruments** category to make Skubana sort products' categories in the proper order. For example, let's rename it to **Z_Musical instruments** (see figure below).

YAMAHA CL-100 ✕

BASIC INFO GALLERY LISTING SKUS VENDOR PRODUCTS FIELDS CUSTOMS

Name: 📄 

UPC | MPN:

Buyer | Brand: Yamaha + ⚙️

Categories: + ⚙️

YAMAHA CG-320 ✕

BASIC INFO GALLERY LISTING SKUS VENDOR PRODUCTS FIELDS CUSTOMS

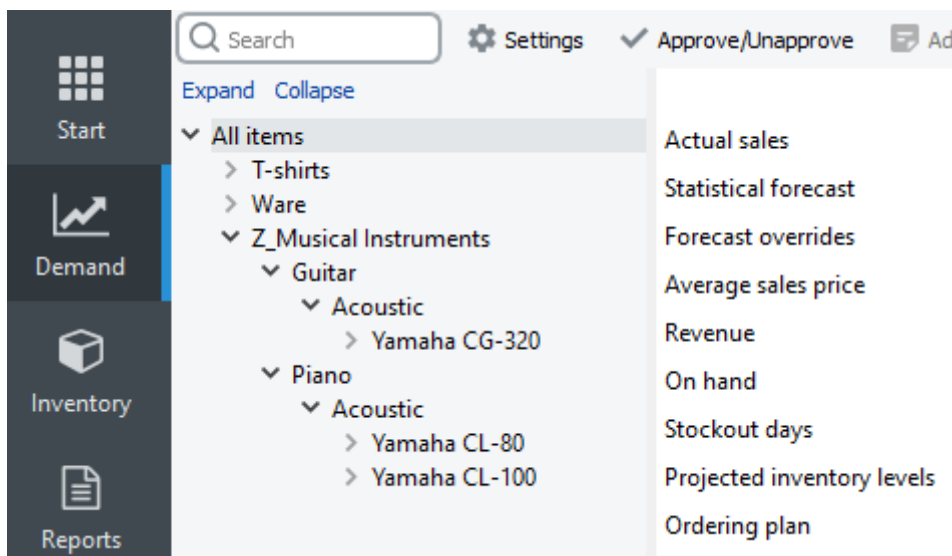

Name: 📄 

UPC | MPN:

Buyer | Brand: Yamaha + ⚙️

Categories: + ⚙️

Now, Skubana sorts categories just we want them to be ordered. The result of import is shown in the figure below.

Integration Limitations

There only one integration limitation - *no on-hand history is available* due to the limitations of

Skubana's API. It means that Streamline is not able to:

- calculate the [inventory turnover](#),
- compute the number of days in the period you had run out of inventory ([Stockout days](#)), and
- automatically determine whether lost sales are caused by a stock-out or zero demand.

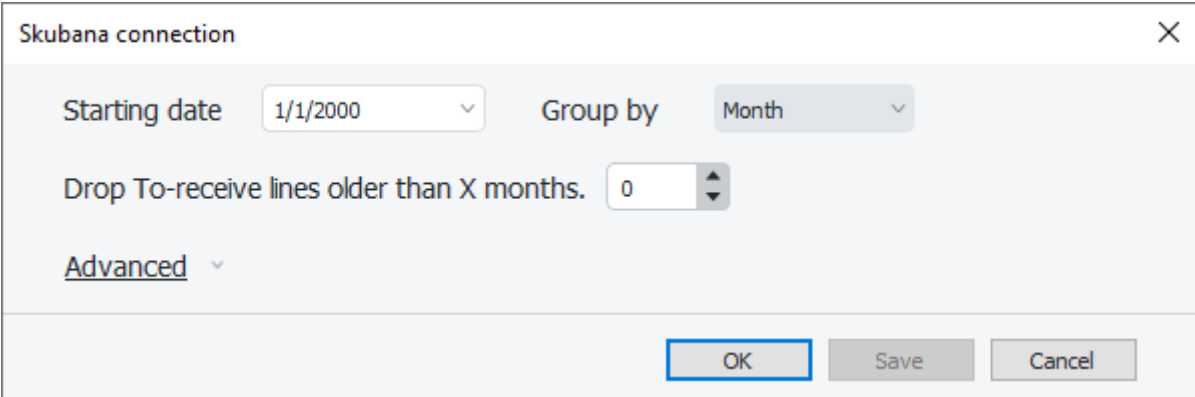

Imported data

Data imported into Streamline is described in the [Inventory Management Systems](#) article.

Data Import Workflow

To create a new Streamline project from Skubana data, do the following:

1. [Login](#) to your Skubana account.
2. Open Streamline and go to the **File > New > Skubana connection**. The **Skubana connection** dialog appears (see figure below).

2. Enter or choose the date to start the import from in the **Starting date** control.

To get accurate forecasts, we recommend providing Streamline with at least 24 months of sales history.

2019/05/21 14:51 · admin

3. Choose the data aggregation period in the **Group by** control. Streamline automatically aggregates your data in the given periods (days, weeks, or months). For example, if you want to see the forecasts, purchase/replenishment plans, and other reports in months, group the data by month.

4. Click **OK**. Streamline starts the authorization procedure (explained below). If the authorization is successful, Streamline will import your data and create a new project.

Authorization Procedure

1. Streamline opens a Skubana's application store page with Streamline app in your default browser. Click on the down-directed arrow to install and add Streamline into your account's apps (see figure below).

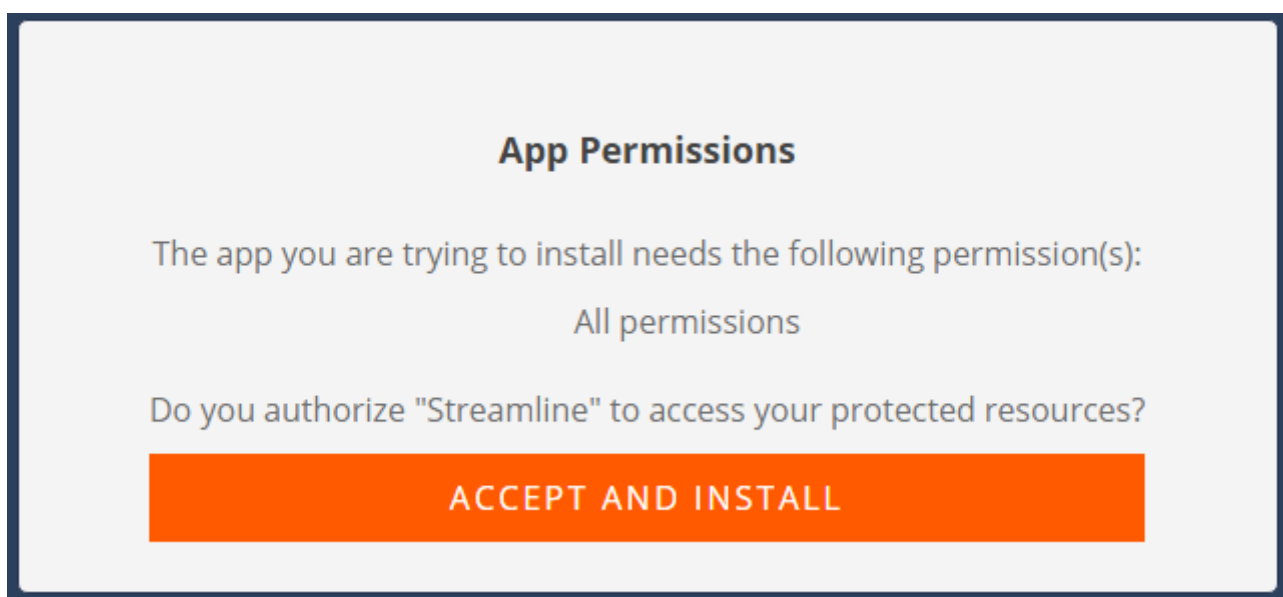

App Details

Author: GMDH LLC

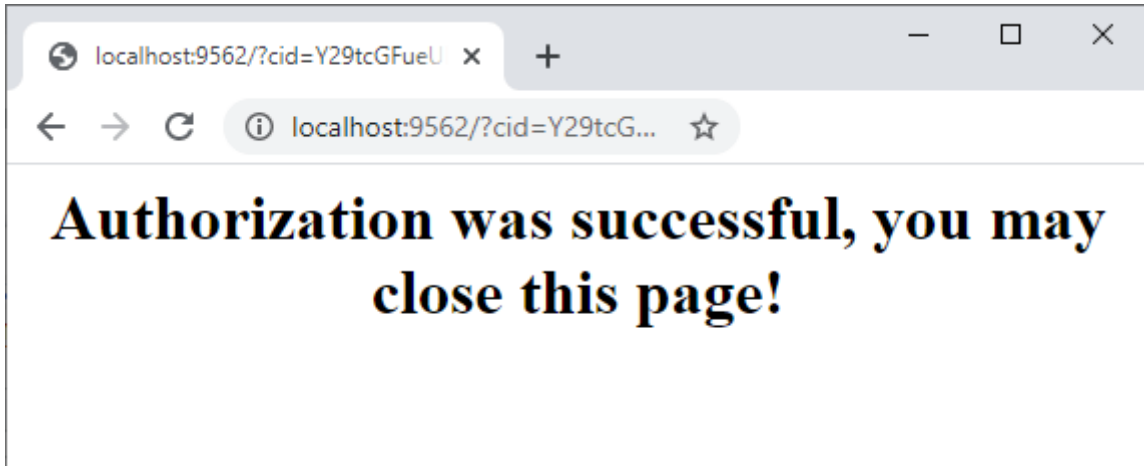

Support: webmaster@gmdhsoftware.com

Version: 1.0

2. Grant Streamline access to your data by clicking the **Accept and Install** button (see figure below).

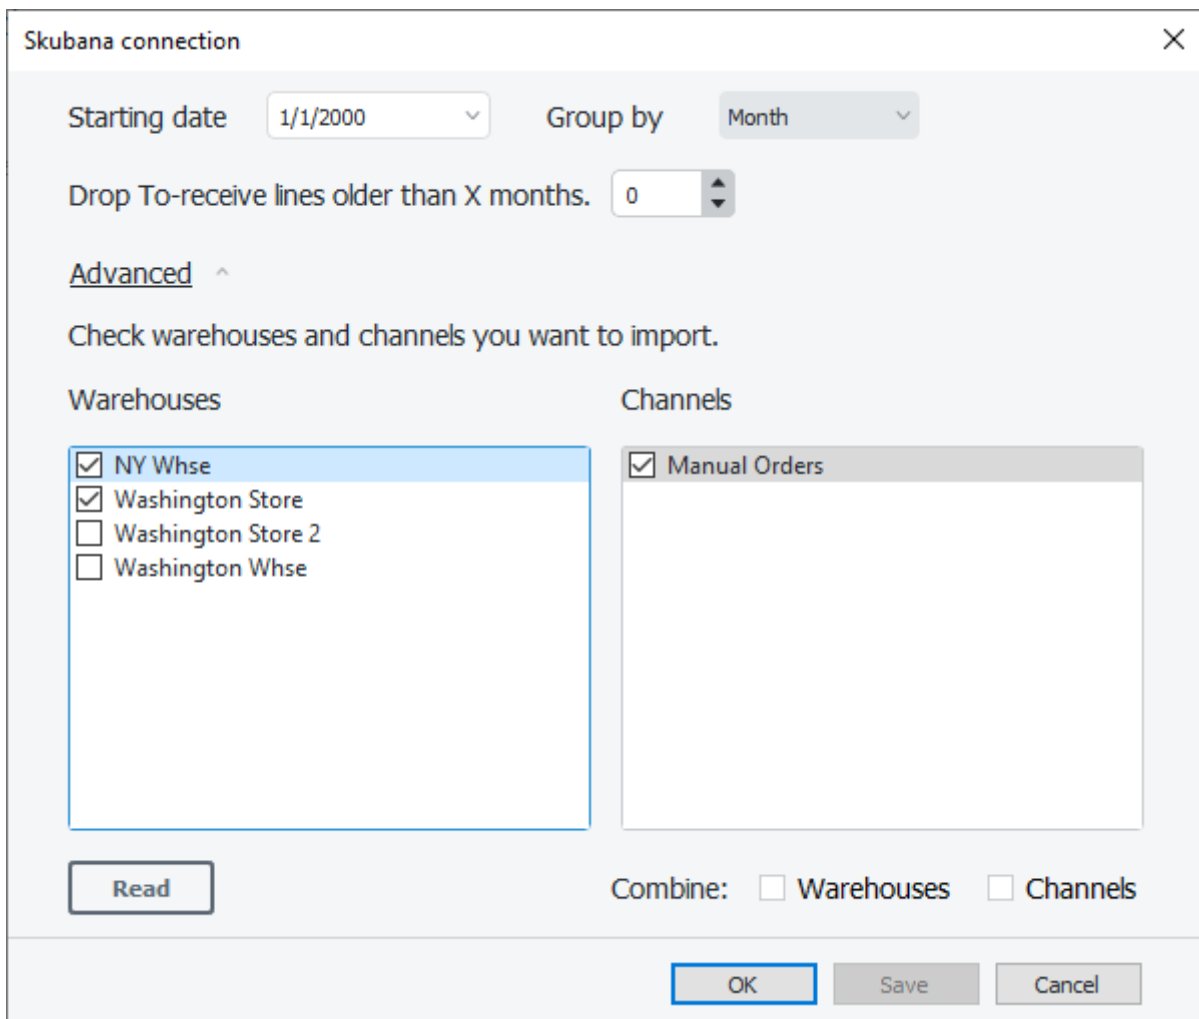

3. After that, Streamline redirects you to a new page with the message shown in the figure below.

Now, you may close the browser and wait up until Streamline imports the data.

Advanced Import

The **Advanced** button of the connection dialog shows some additional settings that allow you to select a particular set of warehouses and channels you want to import (see figure below). You can combine channels, warehouses, or both of them.

To make use of the settings:

1. Read your warehouses and channels from Skubana by clicking the **Read** button. This action may require you to go through the [authorization procedure](#).
2. Select the necessary warehouses and channels from the lists.
3. Choose your combine option.
 - **Warehouses** - combines all the selected warehouses into one virtual warehouse.
 - **Channels** - combines all the selected channels into one virtual channel.

2020/12/08 13:46 · admin

4. Click **OK** to start the data import.
